

MKS Implementer Integration Training

A successful configuration management system is not built on software alone. At MKS, our professional services team is committed to understanding our clients' ever changing development environments and providing training, upgrade, implementation and installation services to meet their unique technical requirements.

We guide you through process analysis, software installation, implementation and product and process training for MKS Source, MKS Integrity and Implementer for IBM i5 product lines. This ensures maximum control over your software development activities and provides a compelling return on your MKS technology investment.

Below is an outline of MKS Implementer Integration training:

Duration: 1 day

Pre-requisite(s): Implementer Developer Training

Maximum number of students per class: 15

Intended audience:

This course is for sites that will use MKS Implementer to manage code changes made in: AS/SET, CA 2E, Peoplesoft, Lansa, or Lotus/Domino. It covers additional integration concepts, operations and processes. It is meant for anyone who will need to perform or know how to perform these tasks:

- Editing code
- Keeping track of code changes
- Deploying code through the source development life cycle

The following material is covered in the course:

- Overview – Basic integration terms and concepts.
- Object Codes – Additional object codes specific to the integration.
- Checking out – Selecting code to be modified by using Implementer.
- Making Changes – Developing in the integration.
- Promotion Requests – Deploying changes using Implementer through the full life cycle.
- Updates – Recording changes in Implementer and the integration.
- Remote deployment – Specifics for promoting integration objects to remote systems.
- Additional processes – Additional functions required by the integration for successful promotion of source changes.
