

MKS Integrity Manager Administrator Training

A successful configuration management system is not built on software alone. At MKS, our professional services team is committed to understanding our clients' ever changing development environments and providing training, upgrade, implementation and installation services to meet their unique technical requirements.

We guide you through process analysis, software installation, implementation and product and process training for MKS Source®, MKS Integrity Manager and Implementer for iSeries/AS400 product lines. This ensures maximum control over your software development activities and provides a compelling return on your MKS technology investment.

Below is an outline of MKS Integrity Manager Administrator Training:

Duration: 1 day

Pre-requisite(s): None

Maximum number of students per class: 5

Intended audience:

This course is for sites that will use MKS Integrity Manager. It covers Integrity administration concepts, operations and processes. It is meant for users who will need to perform or know how to perform these tasks:

- Configuring the Integrity Server
- Setting up security and permissions
- Customizing the Integrity installation

The following material is covered in the course:

- Licensing – How Integrity Server licensing works.
- Federated Server – The concepts behind the MKS Federated Server technology.
- Properties Files – Configuring server properties files to suit your needs.
- Unified Administration – Managing the Integrity Server and Integrity Manager through the MKS Administration Client.
- Service Packs – The Integrity Server service pack process.
- Security – Security realms and schemes that can be implemented.
- Access Control Lists (ACLs) – Controlling user and group access.
- Workflow – Setting up Integrity Manager to follow a company process.
- Form Design – Creating custom layouts for viewing, editing and printing Integrity Manager items.
- Event Triggers – Creating customized Integrity Manager actions.
- Reports – Displaying Integrity Manager item information.
- Notifications – Setting up email notifications for Integrity Manager users.
- Portfolios – Creating custom fields such as Query Backed Relationships and Item Backed Picklists
- Time Tracking – Configuring Time Tracking capabilities
- Administrator Objects – Creating and designating common user features such as Dashboards and Reports as “Admin Only”
