

Integrity 10 - Document View Field Filtering

The Document view now allows you to filter by visible and non-visible fields in the document. In addition, you can apply a recent field filter, clear all applied text and field filters, and remove/edit/invert an applied field filter.

The screenshot shows the Integrity 10 Requirements Analyst interface. The main window displays a document with a search filter 'waterproof' applied. A context menu is open over the document content, showing options like 'Text...', 'Category...', 'Priority...', 'ID...', 'Document ID...', 'Other filter...', 'Recent Filters', and 'Reset'. Red arrows point to various UI elements with labels: 'Filter Status', 'Text Filter', 'Remove Text Filter', 'Field Filter', 'Status Bar', 'Filtered Document Items', and 'Field Filter Menu'.

Company	Waterproof to.
abc	80
xyz	100
ddd	100
zzz	115

Filter Status - As you apply a filter to the Document view, the filter status icon animates to indicate progress. When you initially apply a filter to an unfiltered Document view, the color of the filter bar changes color. When all filters are removed, the filter bar reverts to the default color.

Text Filter - Filters items by visible text in the Document view. Type the text that you want to filter by. The list of items is filtered when there is a pause in typing or when you finish typing.

Remove Text Filter - Clicking clears the text filter, removing the applied text filter.

Field Filter - Filters items by fields in the Document view.

To filter by a field, click **where** and select a field from the list. To filter by a field that does not display in the where menu, select **where > Other filter**.

To apply a recent field filter, select **where > Recent Filters**.

To remove all applied field filters, select **where > Reset**.

To remove an applied field filter, right-click on the applied field filter and select **Remove**.

To edit an applied field filter, right-click on the applied field filter and select the field name.

To invert an applied field filter, right-click on the applied field filter and select **is not**.

Status Bar - Displays the number of items matching the filter and the selected items.

Filtered Document Items - Filtering removes non-matching rows from the content pane only. All nonmatching rows in the outline view remain visible to retain a complete view of the outline; however, the non-matching rows are greyed out.
